Give Your Customers the Quality and Innovation They Deserve

## Mathews Brothers Product Line Highlights

Representing the ultimate in framing technology, the **Clara Starrett** family of windows meets DOE's stringent R5 performance criteria, using a single lite of low-e, thus allowing in more beneficial visible daylight. Designed from the outset for high-performance, line also offers maximum flexibility in window design, appearance and glazing options.

Constructed with framing made with a unique composite-acrylic blend, the **Noah Merrill** family of products marries the aesthetic appeal of classic stile-and-rail wood construction with the maintenance freedom of PVC. Boasting better thermal properties than wood or fiberglass, the material is both weldable and bendable to offer design flexibility.

Mathews Brothers is one of the few remaining window companies still producing true-divided-lite windows, putty glazed by hand, the way we've done it for 158 years. Whether a project requires historic accuracy or an architectural statement needs to be made with windows, the **O.E. Frost** line offers a vast array of options of wood species and glazing configurations bringing the latest technology to early American quality.

The **Spencer Walcott** family of windows and doors offers a full complement of products for new construction or remodeling projects. The line is customizable with such options as exterior casing, a pediment head, interior extensions and a variety of glazing packages and custom exterior paint. The line (formerly known as Alliance) can work within a project's budget, while still exceeding the latest Energy Star requirements.
